## **Consumer Price Index, Los Angeles area — December 2021**

### **Area prices were up 0.4 percent over the past month, up 6.6 percent from a year ago**

Prices in the Los Angeles area, as measured by the Consumer Price Index for All Urban Consumers (CPI-U), increased 0.4 percent in December, the U.S. Bureau of Labor Statistics reported today. (See [table A.](#)) Regional Commissioner Chris Rosenlund noted that the December increase was influenced by higher prices for household furnishings and operations as well as shelter. (Data in this report are not seasonally adjusted. Accordingly, month-to-month changes may reflect seasonal influences.)

Over the last 12 months, the CPI-U advanced 6.6 percent. (See [chart 1](#) and [table A.](#)) Food prices increased 7.0 percent. Energy prices jumped 33.9 percent, largely the result of an increase in the price of gasoline. The index for all items less food and energy increased 4.4 percent over the year. (See [table 1.](#))

**Chart 1. Over-the-year percent change in CPI-U, Los Angeles-Long Beach-Anaheim, CA, December 2018–December 2021**

| Dec 2021..... | 6.6       | 4.4                            |

## Food

Food prices rose 0.4 percent for the month of December. (See [table 1.](#)) Prices for food at home increased 0.7 percent, with four of the six grocery categories recording increases. Prices for food away from home edged up 0.1 percent for the same period.

Over the year, food prices increased 7.0 percent. Prices for food at home advanced 8.1 percent. Increases across food at home expenditure categories ranged from 4.7 percent for cereals and bakery products to 10.5 percent for meats, poultry, fish, and eggs. Prices for food away from home increased 6.0 percent since a year ago.

## Energy

The energy index inched down 0.1 percent over the month. The decrease was mainly due to lower prices for natural gas service (-4.9 percent). Prices for electricity were unchanged, while gasoline prices increased 0.6 percent in December.

Energy prices surged 33.9 percent over the year, largely due to higher prices for gasoline (46.5 percent). Prices paid for natural gas service rose 18.3 percent, and prices for electricity moved up 15.5 percent during the past year.

## All items less food and energy

The index for all items less food and energy advanced 0.4 percent in December. Higher prices for household furnishings and operations (4.7 percent) and shelter (0.4 percent) were partially offset by lower prices for recreation (-0.7 percent) and apparel (-0.7 percent).

Over the year, the index for all items less food and energy increased 4.4 percent. Components contributing to the increase included new and used motor vehicles (13.7 percent), recreation (7.2 percent), motor vehicle insurance (7.2 percent), and shelter (3.4 percent).

**The January 2022 Consumer Price Index for the Los Angeles area is scheduled to be released on February 10, 2022**

### **Coronavirus (COVID-19) Pandemic Impact on December 2021 Consumer Price Index Data**

Data collection by personal visit for the Consumer Price Index (CPI) program has been suspended almost entirely since March 16, 2020. When possible, data normally collected by personal visit were collected either online or by phone. Additionally, data collection in December was affected by the temporary closing or limited operations of certain types of establishments. These factors resulted in an increase in the number of prices considered temporarily unavailable and imputed.

While the CPI program attempted to collect as much data as possible, many indexes are based on smaller amounts of collected prices than usual, and a small number of indexes that are normally published were not published this month.

For each month from March 2020 to December 2021, BLS has published a summary of the impact of the pandemic on the Consumer Price Index news release and data. The impact summary for December is available at [www.bls.gov/covid19/consumer-price-index-covid19-impacts-december-2021.htm](http://www.bls.gov/covid19/consumer-price-index-covid19-impacts-december-2021.htm). Beginning with publication of January 2022 data in February 2022, this month-specific impact summary will be discontinued. However, information related to the impact of the pandemic will continue to be available at [www.bls.gov/covid19/effects-of-covid-19-pandemic-on-consumer-price-index.htm](http://www.bls.gov/covid19/effects-of-covid-19-pandemic-on-consumer-price-index.htm).

### **Technical Note**

The Consumer Price Index (CPI) is a measure of the average change in prices over time in a fixed market basket of goods and services. The Bureau of Labor Statistics publishes CPIs for two population groups: (1) a CPI for All Urban Consumers (CPI-U) which covers approximately 93 percent of the total U.S. population and (2) a CPI for Urban Wage Earners and Clerical Workers (CPI-W) which covers approximately 29 percent of the total U.S. population. The CPI-U includes, in addition to wage earners and clerical workers, groups such as professional, managerial, and technical workers, the self-employed, short-term workers, the unemployed, and retirees and others not in the labor force.

The CPI is based on prices of food, clothing, shelter, and fuels, transportation fares, charges for doctors' and dentists' services, drugs, and the other goods and services that people buy for day-to-day living. Each month, prices are collected in 75 urban areas across the country from about 6,000 housing units and approximately 22,000 retail establishments—department stores, supermarkets, hospitals, filling stations, and other types of stores and service establishments. All taxes directly associated with the purchase and use of items are included in the index.

The index measures price changes from a designated reference date; for most of the CPI-U the reference base is 1982-84 equals 100. An increase of 7 percent from the reference base, for example, is shown as 107.000. Alternatively, that relationship can also be expressed as the price of a base period market basket of goods and services rising from \$100 to \$107. For further details see the CPI home page on the Internet at [www.bls.gov/cpi](http://www.bls.gov/cpi) and the CPI section of the BLS Handbook of Methods available on the internet at [www.bls.gov/opub/hom/cpi/](http://www.bls.gov/opub/hom/cpi/).

In calculating the index, price changes for the various items in each location are averaged together with weights that represent their importance in the spending of the appropriate population group. Local data are then combined to obtain a U.S. city average. Because the sample size of a local area is smaller, the local area index is subject to substantially more sampling and other measurement error than the national index. In addition, local indexes are not adjusted for seasonal influences. As a result, local area indexes show greater volatility than the national index, although their long-term trends are quite similar. **NOTE: Area indexes do not measure differences in the level of prices between cities; they only measure the average change in prices for each area since the base period.**

The Los Angeles-Long Beach-Anaheim, CA metropolitan area includes Los Angeles and Orange Counties in California.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339.

**Footnotes**

(1) Indexes on a December 1977=100 base.

(2) This index series was calculated using a Laspeyres estimator. All other item stratum index series were calculated using a geometric means estimator.

(3) Indexes on a December 1982=100 base.

(4) Special index based on a substantially smaller sample.

(5) Indexes on a December 1993=100 base.

(6) Indexes on a December 1997=100 base.
